## Lead / Staff Software Engineer

Backend & Platform · Go · Python · Ruby · Node.js

### PROFILE

**Hands-on software engineering leader with 18+ years of documented experience.** Builds backend products and platforms with the reliability, delivery, cloud, and operational perspective required to make them work in production.

### CORE EXPERTISE

#### Development

Go, Python, Ruby, Node.js

#### Data

PostgreSQL, MySQL, MongoDB

#### Systems

Redis, RabbitMQ, NATS

#### Engineering

Distributed systems, product architecture, domain decomposition, API design, automation

#### Operations

SRE, DevOps, cloud architecture, CI/CD, observability, autoscaling, reliability

#### Leadership

Technical direction, architecture decisions, delivery ownership, mentoring, Agile workflows

### LANGUAGES

#### Portuguese

Native

#### English

Advanced

### EDUCATION

#### Data Analysis and Development

Universidade Estácio de Sá · 2016–2018

#### Computer Technician

Escola Técnica Cândido Mendes

### PRODUCTS BUILT END-TO-END

### SELECTED ENGINEERING IMPACT

#### Product Bootstrap Platform · Millennium bcp

Developed a platform that automatically created cloud product stacks and their dependencies while establishing reproducible Development, QA, Staging, and Production environments.

**Impact:** 70% less time to start new projects and 85% less time to publish them, with fewer environment errors and less rework.

Go · PostgreSQL · Redis

#### Software Modernization · Estante Virtual

Led architecture, domain decomposition, data migration, and new service development in the transition from a Perl/MySQL monolith to Ruby on Rails services with PostgreSQL per service.

**Impact:** reduced coupling and enabled services to be developed and published independently, accelerating new solutions and improvements.

### EXPERIENCE

#### Co-Founder · GacTec

Jun 2020 — present

End-to-end ownership of product strategy and engineering, covering conception, architecture, implementation, data, infrastructure, release, and ongoing operation.

- Built Cointábil, PalmBites, PalmBills, and StreetSlopes across web, backend, platform, and native mobile stacks.
- Directed a multidisciplinary team of eight engineers and designers across the complete software delivery lifecycle.
- Designed complete software ecosystems, led client delivery, introduced Agile workflows, and mentored technical teams.

#### DevOps Specialist · Millennium bcp

Nov 2023 — May 2026

Developed internal products for cloud product orchestration and automated infrastructure delivery. Built the Product Bootstrap Platform highlighted above, combining hands-on software development with platform engineering.

#### System Reliability Engineer · Algometric

Nov 2022 — Oct 2023

Created a secure multi-cloud environment for encrypted data and multi-party computation, including private routes and high-performance communication between providers.

Cointábil

Accounting operations for Portugal, from collection and fiscal validation to reconciliation and auditable closing.

Go · Next.js · PostgreSQL · NATS

PalmBites

Direct digital commerce and multi-channel operations for food businesses.

Go · Next.js · PostgreSQL · Redis

PalmBills

Native, private Portuguese invoice and expense management.

SwiftUI · Jetpack Compose

StreetSlopes

Worldwide map and community platform for street riders and creators.

Go · Next.js · PostgreSQL · OpenStreetMap

SRE Coordinator · Afterverse

Jul 2021 — Nov 2022

Led reliability for thousands of game servers across eight countries and four continents. Balanced player experience, availability, performance, observability, and infrastructure cost.

SRE / DevOps Engineer · Descomplica

Jun 2020 — Feb 2021

Helped design and build the AWS foundation for Faculdade Descomplica, including scalable infrastructure, CI/CD, and observability for thousands of students.

SRE / DevOps Specialist · Stone

Oct 2019 — May 2020

Worked on the migration of mission-critical payment infrastructure from on-premise systems to a secure, multi-region cloud architecture with high availability and disaster recovery.

Tech Leader / DevOps · Estante Virtual

May 2015 — Apr 2019

Led the software modernization highlighted above, while establishing automated delivery, integration testing, autoscaling, observability, security, and cloud cost discipline.

Senior PHP Developer / SysAdmin · Eguana Soluções

May 2012 — Apr 2015

Developed PHP systems and managed AWS server architecture, autoscaling, and web runtimes including Apache, IIS, nginx, and Node.js.

Additional roles

DevOps Engineer, Vertigo Tecnologia · Aug–Oct 2019

DevOps Engineer / Software Developer, Autonomous · Apr–Aug 2019

PHP Developer, Portal Teleguia · Dec 2011–Mar 2012

PHP Developer, West Internet Banda Larga · Jul 2008–Jan 2010
